

The DuraSpa

The First Truly Portable, High Performance
5 - 6 Person Spa
With Two Loungers, One Deep Captains
Seat And Two Hydrotherapy Seats.

The latest in portable
spa technology

The DuraSpa

A luxurious spa designed with a professional level of hydrotherapy to suit your lifestyle and bring a lifetime of relaxation.

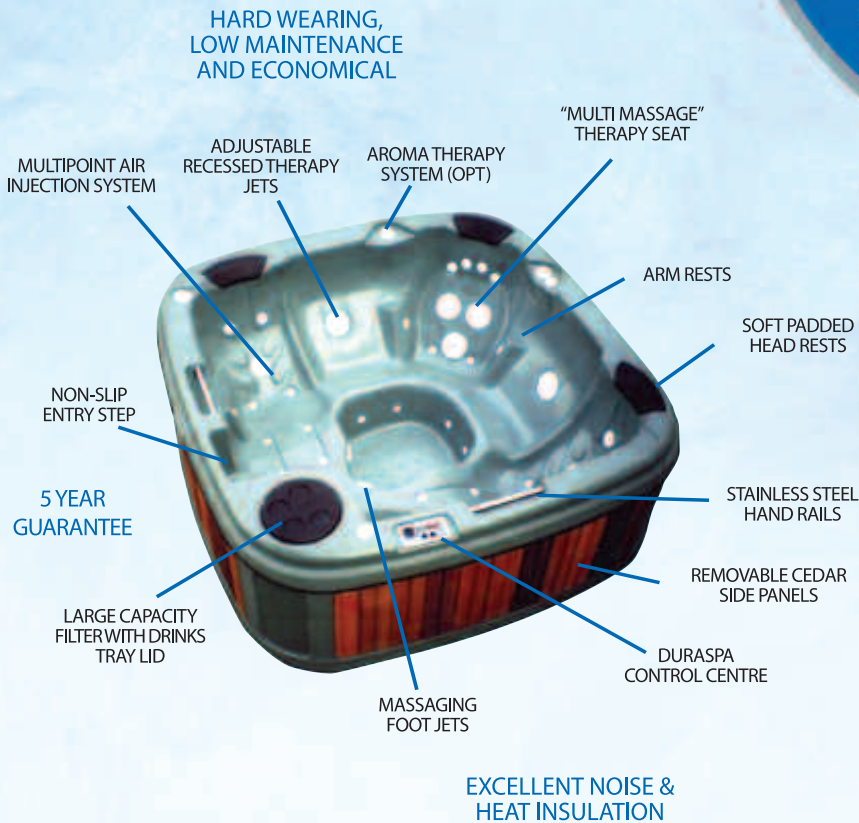

The unique "DuraSpa" design exhibits modern, soft flowing lines with rounded corners and curved sides incorporating removable cedar panels. Its shape has been carefully contoured to provide smooth full depth seating, natural reclining positions and a special therapy seat. Features also include supporting armrests, padded headrests and safety handrails, plus an entry step that doubles as a small child's seat and a foot massage section in the floor well.

It is the first truly portable five person spa with two loungers - one deep captain's seat and two hydro therapy seats. The revolutionary design makes DuraSpa totally unique. An advanced RIM (Rotational Integrated Mould) moulding process is used to form the spa, the surrounds and the base in one piece, thus reducing weight, increasing strength and lowering cost with excellent heat and noise insulation - all great news for our customers. The unique design also eliminates the rotting, cracking and corrosion problems which often affects many other spas.

Finished in an attractive granite effect, DuraSpa is easy to clean, chemically resistant and UV stable. It's the first truly portable, hard wearing, low maintenance and economical 5 person spa that's fully equipped to provide a professional level of hydro therapy.

Relaxing, Revitalising, Rewarding. RotoSpa.

A powerful performance

For maximum performance, the DuraSpa uses a high flow manifold distribution system that delivers air and water individually to each jet at uniform pressures.

The latest adjustable therapeutic and rotating massage jets in different sizes have been strategically positioned to give various massage effects in each seating area.

Massage away the stresses of the day with the DuraSpa's larger, dual speed pumps with its additional jets for a greater all over massage; or relax and revitalise with the turbo air injection system that adds millions of tiny energising air bubbles to the water behind your back, around your legs and under your feet and gives the most invigorating massage experience. In addition, an 'Aroma Therapy' dispensing unit is available on some models.

Built to last. Engineered to perform. Superb Specification:

DuraSpa Elite S220 Specification:

(Single Speed Pump, 22 Jets, Multi speed air blower, Digital cont, 10amp)

Size	1990 x 1990 x 770 Deep - Fits through standard doorway!
